

WS_FTP PROFESSIONAL

Transfer files anywhere, anytime, with complete security

Ipswitch WS_FTP® Professional is the world's most popular file transfer client with over 40 million users. It moves data and transfers files anywhere, at anytime, with complete security. WS_FTP Professional delivers lightning-fast transfer speeds, best-in-class security and time saving automation capabilities such as 256-bit transfer encryption, OpenPGP file encryption, file integrity checking, email notification, backup, folder synchronization, compression, post-transfer events and scheduling of file transfers.

No other file transfer client offers the ease-of-use, performance, functionality and security that WS_FTP Professional delivers. WS_FTP is used by millions of customers worldwide to transfer billions of files every week. Our fast transfer speeds and acclaimed customer support make WS_FTP Professional the clear choice!

BULLET-PROOF SECURITY PROTECTS FILES BEFORE, DURING AND AFTER TRANSFER

WS_FTP Professional delivers the strongest levels of encryption of any file transfer client on the market. Industry-leading 256-bit AES encryption and FIPS 140-2 validated cryptography secures files during transfers over SSL and SSH protocols. File integrity checking up to SHA-512 uses built-in file verification mechanisms to guarantee delivery and validate that transferred files have not been compromised in any way and ensure that the source and destination are exact matches.

WS_FTP Professional is the first file transfer client to deliver integrated OpenPGP file encryption to further enable the safe transfer and storage of your private and confidential files. WS_FTP Professional includes two built-in OpenPGP modes, enabling the encryption of individual files on your computer to protect them when stored locally, to secure files used as email and IM attachments or stored on laptops, networks or removable media, as well as to automatically encrypt a file before transferring it to a remote server.

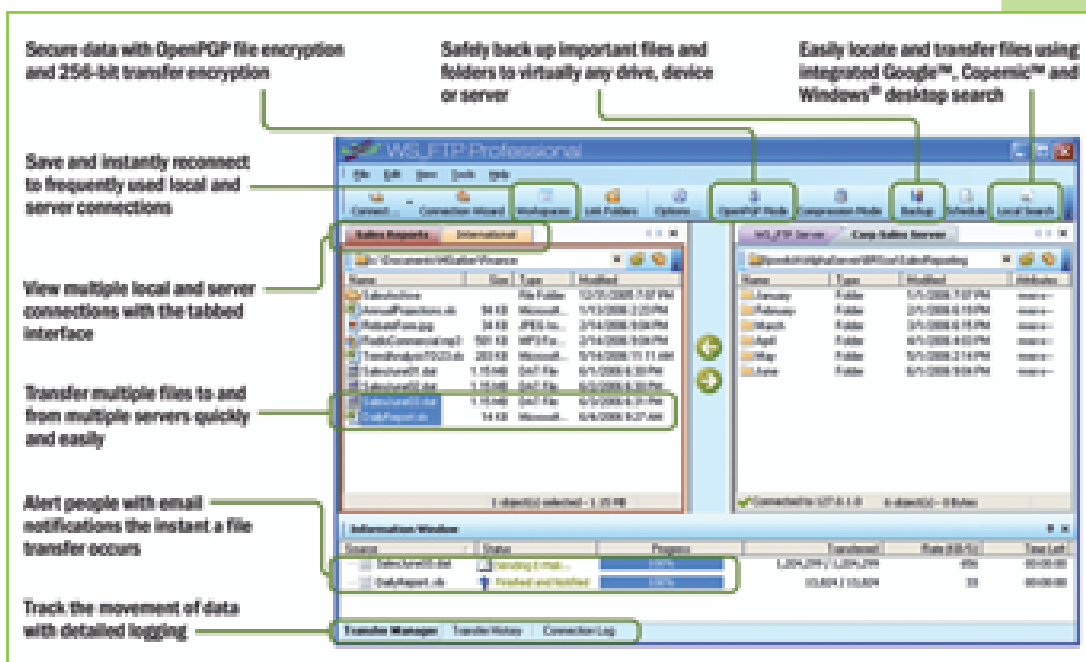

EXCEED COMPLIANCE AND CORPORATE GOVERNANCE REQUIREMENTS

Leading security, integrity and auditing capabilities enable compliance with government regulations, company policies, vendor requirements, and customer expectations for secure file transfer. WS_FTP Professional exceeds the requirements of many compliance regulations worldwide, including:

- HIPAA
- Sarbanes-Oxley
- PCI DSS
- GLBA
- MA 201 CMR 17
- BASEL II
- J-SOX
- FIPS

"...[WS_FTP Professional] has been integral in helping us maintain compliance and it's a major component of our processing personal client data and our compliance with SOX."

John Beede, Raymond James

The screenshot shows the WS_FTP Professional interface with several callouts pointing to specific features:

- Secure data with OpenPGP file encryption and 256-bit transfer encryption**: Points to the 'OpenPGP Mode' button in the top toolbar.
- Safely back up important files and folders to virtually any drive, device or server**: Points to the 'Backup' button in the top toolbar.
- Easily locate and transfer files using integrated Google™, Copernic™ and Windows® desktop search**: Points to the 'Local Search' button in the top toolbar.
- Save and instantly reconnect to frequently used local and server connections**: Points to the 'Connections' tab in the top toolbar.
- View multiple local and server connections with the tabbed interface**: Points to the 'Local Drive' and 'Remote Server' tabs.
- Transfer multiple files to and from multiple servers quickly and easily**: Points to the file list area where multiple files are selected.
- Alert people with email notifications the instant a file transfer occurs**: Points to the 'Transfer Manager' window at the bottom.
- Track the movement of data with detailed logging**: Points to the 'Transfer Log' window at the bottom.

Lightning fast transfer speed, industry-leading security and time-saving automation

AUTOMATION FEATURES ENHANCE PRODUCTIVITY

WS_FTP Professional includes an industry-leading set of easily programmed automation features that simplify file transfer tasks, save time and improve communications.

SCHEDULE: Program your most critical transfers by scheduling one-time or more elaborate recurring scheduling frequencies.

BACKUP: Safely archive folders and files to protect against data loss. Ability to schedule and compress backups to any location such as USB or DVD drives, network directories or server connections.

SYNCHRONIZATION: Have one folder mirror the contents of another. Easily define which files get transferred and how new or updated files are handled. Great tool for updating a website or sharing files on a server.

COMPRESSION: Increase transfer speeds and security by automatically compressing and password protecting files into .ZIP format before uploading

SCRIPTING: Automate recurring transfer tasks with the programmable scripting.

EMAIL NOTIFICATIONS: Automatically send email notifications when file transfers occur to immediately inform people that new file has been transferred. Many customers also send email confirmations to themselves to verify that a file transfer happened.

POST TRANSFER FILE AUTOMATION: Schedule a post transfer file action such as deleting, moving or renaming the source file after it has been transferred.
