

WhatsUp Gold Flow v2.0 Monitor Features Matrix

Please find below the matrix mapping of new features and functionality in Flow Monitor v2.0 to the WhatsUp Gold product family.

Flow Monitor v2.0	Standard Edition	Premium Edition	MSP Edition	Distributed Edition
General Features				
Support of sFlow v5 standard (sampled flow data)				
Support of Juniper jFlow (sampled flow data)				
Extensive support for switches and routers from Cisco, Juniper, Foundry, Extreme and Enterasys, 3Com, AlaxalA, Alcatel-Lucent, Allied Telesis, Brocade, Comtec, D-Link, Force 10, H3C, HP, Hitachi and NEC and others.				
Alert Center provides the ability to provide alerts and notifications based on NetFlow generated thresholds.				
Management Console				
Custom names for Flow interfaces				
Configuration of role based management for user access to configuration and reports				
Reporting				
Four new troubleshooting reports: Interface report, ICMP Type, Packet Distribution and Host Report				
Host Report (WHOIS) information is provided as a popup from within sender and receiver reports.				
ICMP Report – provides traffic data on 7 different ICMP parameters				
The Packet Size Distribution report details the number of packets traversing the network with different packet size (bytes per packets), providing a different point of view of the traffic data.				

Flow Monitor v2.0	Standard Edition	Premium Edition	MSP Edition	Distributed Edition
All Interface reports can be grouped by interface name or interface.				
Reports now support configuration of fields to display traffic information by either: Bytes, Packets or Flows
